Podcasting 101

Podcasting 101 for Easy Listening – Capturing quality audio, editing, processing software to podcasting.

Bob is the Director of Operations and Programs for The New York Military Affairs Symposium at the CUNY Graduate Center and has launched a website with podcasts at nymas.org.

Podcasting is making audio files (most commonly in MP3 format) available online so that users can automatically download the files to listen whenever they want.

"Podcasting is a way of publishing files to a website that allows users to subscribe to the site and receive new files as they are posted. Most podcasts are spoken word audio created by individuals, often on a particular theme such as technology or movies. Because new files are downloaded automatically by subscribers, podcasting allows individuals to have a self-published, syndicated radio show."

(Wikipedia)

NYMAS Podcasts have the potential of changing the character and reputation of NYMAS worldwide.

We are truly reaching out with the whole talks [which, until now, have been limited to 30 to 50 people in one two hour period weekly] to a Worldwide Internet Population (2005) of 1.08 billion (Computer Industry Almanac) 24 hours per day

plus an estimated 200 million iPods and other MP3 players

More than 110 million iPods (alone!) have been sold worldwide in the last six years, and it has been widely credited with revolutionizing the way we listen....

What's <u>now</u> driving podcasting?

Audio Traps to Avoid

- •Many people begin their sentences loudly then tail off. You may need to compensate.
- •Beware microphone handling noise, especially with cheap mics and inexperienced presenters.
- •If wind is a problem, use a sock or (preferably) windscreen on the mic.
- •Background music means death in the edit suite. Turn any background music off.

An ounce of presence is worth a pound of fidelity

	24bit / 44.1kHz	32	62	125	251	
	16bit / 48kHz	44	86	173	347	
	24bit / 48kHz	29	57	115	231	
	16bit / 96kHz	22	43	86	173	
	24bit / 96kHz	14	28	57	115	
4 Treek Mede (mana traeka)						
4-Track Mode (mono tracks)						
Data Format		Memory Size				
		512MB	1GB	2GB	4GB	

At the standard 128kbps rate, a sixminute MP3 will consume about six megabytes.

You may be able to send that by e-mail,

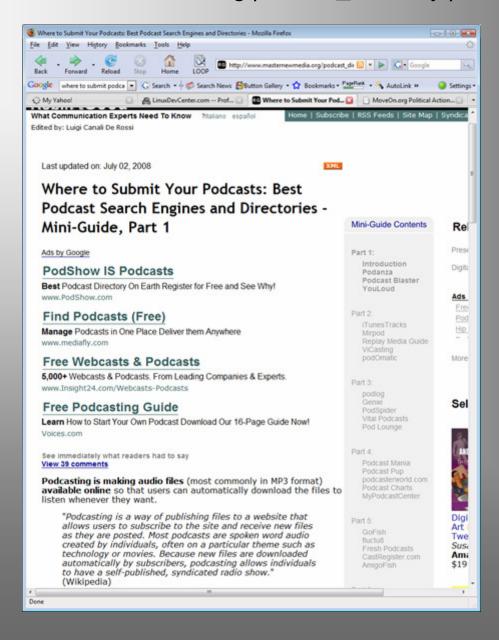

but a more reliable (and polite, if your recipient isn't expecting such a big attachment) approach would be to upload it to a file-transfer site such as YouSendIt.com or (even easier) Senduit.com.

Or, of course, your own server.
